                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ŏ
                                                                                                                                                             expoplysaccharides (EPS). These energy are designated EPSA-EPSN, and are encoded by open reading frames epsA-epsN. The enzymes are isolated are encoded by open reading frames epsA-epsN. The enzymes are isolated from Lactobacillus delbrueckii bulgaricus. The proteins are used in a method for the synthesis of EPS, which includes at least one step of forming a bond (alpha or beta-isomer) between C-1 (carrying the ceducing aldebyde function, of an activated D-galactose pyranose), and a phosphate on a lipophilic or proteinaceous primer. Stepwise synthesis of EPS occurs with, in each step, addition of a new sugar unit, through its hemi-acetyl function, to an alcoholic hydroxyl of a second sugar unit, present at the end of a chain of sugar residues bonded to the primer. EPSA is attenuator of transcription which influences from the control of the molecular weight and/or the length of the could involved in the control of the molecular weight and/or the length of the could be EPSD. EPSL and EPSM are involved in synthesis of EPSE is a glactosy- or glucosyl-phospho-transferase which catalyses the transfer of the first saccharide on the primer; EPSF and EPSR is calpha-glycosyltransferases; EPSG as a glucosyltransferase; EPSK is calpha-glycosyltransferases; EPSG is a glucosyltransferase; EPSK is cresponsible for the polymerisation of the repetitive units; and EPSN is responsible for export of the EPS enzyme are used to improve properties of foods, particularly fermented milk products such as yoghurt can debse. e.g. their organoleptic properties and flavour stability.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for Identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium, coryneform bacteria are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a protein described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     mutation point of a gene, measuring expression of a gene, analysing expression profile or pattern of a gene and identifying homologous gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel polynucleotides derived from Coryneform bacteria, for identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ochiai K, Yokoi H;
                                                                                                                                                                                                                                                          Coryneform bacterium; amino acid synthesis; vitamin; saccharide; organic acid synthesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Length 274;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Claim 17; SEQ ID NO: 3905; 246pp + Sequence Listing; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Score 240.5; DB 22; Length

are useful for synthesising simplyated oligosaccharides such as ganglioside, lysoganglioside or their mimics. Glycosyltransferases are useful for chemo-enzymatic synthesis of oligosaccharides, including gangliosides and other oligosaccharides that have biological activity. The enzymes and nucleic acids that encode them are useful for studies of the pathogenesis mechanisms of organisms that synthesize ganglioside mimics, such as C. jejuni and the nucleic acids are used as probes to study expression of genes involved in ganglioside mimics, such as C. jejuni and the concleic acids are used as probes to study expression of genes involved in ganglioside mimetic synthesis. Antibodies raised against the glycosyltransferases are also useful for analyzing the cucleic acids are also useful for designing antisense oligonucleotides for inhibiting expression of the Campylobacter concleic acids are also useful for designing antisense oligonucleotides for inhibiting expression of the Campylobacter carges that are involved in the biosynthesis of ganglioside mimics that can mask the pathogens from the host's immune system. The oligosaccharides are useful as dlagnosing reagents or as therapeutics
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel glycosyltransferase polypeptides and polynucleotides useful for biosynthesis of ganglioside and ganglioside mimics, as diagnostic reagents and as immunogen for producing antibodies
                                                                                                                                                                                            acetyltransferase; glycosyltransferase; Beta-1,4-GalNAc transferase; Beta-1,3-galactosyltransferase; alpha-2,3-sialyltransferase; sialic acid synthase; CMP-sialic acid synthetase; mimic; antibody; immunogen; ganglioside.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A reaction mixture for the synthesis of a sialylated oligosaccharide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    and as immunogens for producing antibodies. Bacterial glycosyltransferase can be used to catalyse the formation of ollosaccharides that are identical to the corresponding mammalian structures and are easier and less expensive to produce in large quantity, compared to the mammalian glycosyltransferase. The

The proteins AAY68982-85 are encoded by the capsular gene cluster of Streptococcus suis serotype 7. The genes in this cluster are involved in polysacoharide biosynthesis of capsular components and antigens. The capsule confers bacterium resistance to complement-mediated opsonophagocytosis. The gene cluster is used as a source of probes and primers for serotype-specific detection of S. suis and is also useful for recombinant production of the proteins. The proteins are then useful for producing antigens that can be used in vaccines, for controlling or eradicating a Streptococcal disease, in humans or animals, e.g. against S. suis in pigs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               124 DOKGNLVYKORESNKIYLTND---IRKMLLNRSILAHPTWCVKKKVFDKLMGYRDLVPVE 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        δ
                                                                      The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are scherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The invention is also useful for the identification of potential new targets in antibiotic development. The antisense nucleic acids can also be used to invention antibiodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in essential prokaryotic cellular proliferation protein.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic

The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibloitics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruqianosa and Enterococcus facealis. The invention is also useful for the identification of potential new targets in antibiotic development. The antisense nucleic acids can also be used to dentify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in essential prokaryotic cellular proliferation protein.

The sequence data for this patent did not form part of the discovery of the printed specification, but was obtained in electronic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          10;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   64 LNEENIGLASSLNKAVKISKGEYIFRMDADDISYPSRFDKQIRFMEEN-SLDFSATLIEL 122

The use of nucleic acid molecules derived from particular assembly and transport genes, particularly wbd (transferase), wax (flippase) and way (polymerase) genes, within o antigen gene clusters improves the specificity of methods for the detection and identification of 0 antigens, e.g. in testing foodor faceal-derived samples, or samples from patients. The O antigen is a major virulence factor of enteropathogenic E. coli strains that cause diarrhoea and haemorrhagic colitis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  13;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The proteins AAV68977-81 are encoded by the capsular gene cluster of Streptococcus suis serotype 9. The genes in this cluster are involved in polygaccharide biosynthesis of capsular components and antigens. The proteins have glycosyltransferase activities (Cps9E, Cps9F) and unknown functions (Cps9D, CpsG, Cps9H). The capsule confers bacterium resistance to complement-mediated opsonophagocytosis. The gene cluster is used as a source of probes and primers for serotype-specific detection of S. suis and is also useful for production of the proteins. The proteins are then useful for producing antigens that can be used in vaccines, for controlling or eradicating a Streptococcal disease, in humans or animals,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New nucleic acid containing the capsular gene cluster of Streptococcus suis, used for serotype-specific detection and to generate antigens or mutants for vaccination
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              RIKILLINEENIGLASSLNKAVKISKGE-----YIFRMDADDISYPSRFDKQIRFMEEN-S 112

                               5 Glycosyltransferases (AAR91311-15) are products of the lgt locus (AAT44061) of Neiserria gonorrhoeae strain F62. Glycosyltransferase LgtA (AAR91311) can be obtd. by expression of the lgtA coding sequence in recombinant host cells. A method for adding GalNAc or GloNAc betal-3 to Gal comprises contacting a reaction mixture confg activated GalNAc or GloNac to an acceptor moiety comprising a Gal residue in the presence of LgtA. Oligosaccharides can be produced that, when attached to non-toxic lipids, are useful for Neisseria waccine prepr. Blood group core oligosaccharides, and mimics of lacto-N-neotetranse, gangliosides and saccharide portions of globoglycolipids can also be produced using the enzymes.

It is the first PGTase reported to be capable of transfer of more than one different saccharide moiety. The PGTase is encoded by nucleotides 445-1488 of a lipo-oligosaccharide gene

                                                                                                                                            The proteins AAY68970-76 are encoded by the capsular gene cluster of Streptococcus suis serotype 1. The genes in this cluster are involved in polysaccharide biosynthesis of capsular components and antigens. The proteins have glycosyltransferase activities (CpsIE, CpsIG, CpsII, CpsIJ, CpsIJ, and CP polymerase activities (CpsIH). The capsule confers bacterium resistance to complement mediated opsonophagocytosis. The gene cluster is used as a source of probes and primers for serotype-specific detection of S. suis and is also useful for recombinant production of the proteins. The proteins are then useful for producing antigens that can be used in vaccines, for controlling or eradicating a Streptococcal disease, in humans or animals, e.g. against S. suis in pigs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  64 LNEENIGLASSLNKAVKISKGEYIFRMDADDISYPSRFDKQIRFMEENSLDFSATLIE-- 121

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Campylobacter jejuni OH4384.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     01-FEB-2000; 2000WO-CA00086.                                                                                                                                                                                                                                                                                                                                                  is useful for synthesising sialylated oligosaccharide construct minnature in the synthesising sialylated oligosaccharide such as ganglioside, lysoganglioside or their minics. Glycosyltransferases of ganglioside, lysogangliosides and other oligosaccharides, that have constituted for chemo-enzymatic synthesis of oligosaccharides, including gangliosides and other oligosaccharides that have bological activity. The enzymes and nucleic acids that encode them are useful for studies of the pathogenesis mechanisms of organisms of that synthesize ganglioside mimics, such as C. jejuni and the nucleic acids are used as probes to study expression of genes or nucleic acids are used in ganglioside mimetic synthesis. Antibodies raised against the glycosyltransferases are also useful for analyzing the expression patterns of these genes involved in pathogenesis. The cultion patterns of these genes involved in pathogenesis. The outleic acids are also useful for designing antisense oligonucleotides for inhibiting expression of the campylobacter concludes that are involved in the biosynthesis of ganglioside mimics of that can mask the pathogens from the host's immune system. The coligosaccharides are useful as diagnosing reagents or as therapeutics and as immunogens for producing antibodies. Bacterial coligosaccharides that are identical to the corresponding mammalian structures and are easier and less expensive to produce in large clantical coligosaccharides that are identical to the corresponding mammalian structures and are easier and less expensive to produce in large duantity compared to the mammalian glycosyltransferase. The cantended origin of the enzymes facilitates expression of large expression systems.
                                                                                                                                                                                            Novel glycosyltransferase polypeptides and polynucleotides useful for blosynthesis of ganglioside and ganglioside mimics, as diagnostic reagents and as immunogen for producing antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 122 LIDQKGNLVYKQRESNKIYLTNDIRKMLLNRSILAHPTW--CVKK----KVFDKLMGYRD 175

                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to the genomic sequence of Pyrococcus abyssi (see AAF86431 and AAH41223-7) and P. abyssi proteins. P. abyssi is a hyperthermophilic archaeon, which is isolated from deep-sea hydrothermal vents. The present sequence is one such P. abyssi protein. The proteins of the present invention have various potential industrial uses, since the proteins are stable at very high temperatures, some up to 110 degrees centigrade.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        122 LIDQKGNLVYKQRESNKIYLTNDIRKMLLNRSILAHPTWCVKKKVFDKLMGYRD--LVPV 179

ANY AAY54086-99 represent enzymes involved in the biosynthesis of exopolysaccharides (EPS). These enzymes are designated EPSA-EPSN, and are encoded by open reading frames epsA-epsN. The enzymes are isolated from Lactchacillus delbrueckii bulgaricus. The proteins are used from Lactchacillus delbrueckii bulgaricus. The proteins are used of forming a bond (alpha or beta-isomer) between C-1 (carrying the ceducing aldehyde function, of an activated D-galactose pyranose), and a phosphate on a lipophilic or proteinaceous primer. Stepwise synthesis of EPS occurs with, in each step, addition of a new sugar unit, through its hemi-acetyl function, to an alcoholic hydroxyl of a second sugar on L., present at the end of a chain of sugar residues bonded to the primer. EPSA is attenuator of transcription which influences control of the molecular weight and/or the length of the polysaccharide; EPSD, EPSL and EPSM are involved in synthesis of EPS; is involved in the control of the molecular weight and/or the length of the colysaccharide; EPSD, EPSL and EPSM are involved in synthesis of EPS; EPSE is a glactosy- or glucosyl-phospho-transferase which catalyses the transfer of the first saccharide on the primer; EPSF and EPSK is calpha-glycosyltransferases; EPSK is a glucosyltransferase; EPSK is capparable for the polymerisation of the repetitive units; and EPSN is responsible for the polymerisation of the repetitive units; and EPSN is responsible for sport of the EPS. The EPS enzyme are used to improve properties of foods, particularly fermented milk products such as yoghurt and cheese, e.g. their organoleptic properties and flavour stability.
